

SelectSurvey.NET Database Schema v4.153.xxx

Overview

SelectSurvey.NET uses a clean, well-designed, relational database model. The same data model is used for Microsoft Access and SQL Server databases.

All tables in the application have a prefix of SUR_. Having this prefix makes it very easy to install the tables in an existing database and to distinguish them from all other tables.

For all tables that have a single column defined as the primary key, the naming convention used is the name of the table, with the SUR_ prefix, plus a suffix of _ID. Thus, the SUR_SURVEY table has a primary key of SURVEY_ID, and the SUR_EMAIL_ADDRESS table has a primary key of EMAIL_ADDRESS_ID.

Foreign keys use the same naming convention as primary keys. Therefore, in all tables, foreign keys can easily be determined by their _ID suffix, and the table each foreign key refers to can be determined by the name of the key, which corresponds to the name of the table.

The rest of this document contains a description of each table, a snapshot of all columns in the table, and a detailed description of each column in each table.

Database Schema:

- [dbo.poll custom report filter](#)
- [dbo.poll id generation](#)
- [dbo.poll item](#)
- [dbo.poll item answer](#)
- [dbo.poll item answer group](#)
